BID No. and Title: DOITB-20-3017-WE: Trailer Mounted Pavement Coring Rig
DATE: March 16, 2020

Questions and Answers (Part 1)

Question 1.

Please provide the model number that the specifications are from.

Answer 1.

The scope of work was created based on an Acker PT-22 and Simco 255 Pavement Test Core. We set the scope to meet the specifications of both models.

Question 2.

The first item is with this type of equipment typically one day of on-site training to cover operation of the rig and cover general maintenance is a listed equipment. Was this omitted in error?

Answer 2.

Onsite training was not intended to be required.

Question 3

Specification 2.14. Our rig uses a Hydraulic Slide to adjust the vertical height position of the core guide. However, the adjustable guide from 2-12" is manual. This seems like two specs were combined in error.

Answer 3

The intent is not for the adjustment to the core barrel guide due to using different diameter core barrels (2-12") to be hydraulically adjustable. Manual adjustments to the core barrel guide are allowed due to the core barrel diameter.

Question 4

For clarification of the instate preference form to be accompanied by a signed opinion by an attorney, do you have an example of a completed opinion from out of state that has no preference?

Answer 4

If there is not a in-state preference in your state, you will need to complete the In-State Preference Form and have an attorney provided a statement stating there is no preference in your state. There is not a specific form or document. This could simply be a document on the attorney's letterhead.
